INSTITUTO DE OPTICA (CSIC)

Peripheral ocular shape, aberrations and refraction: impact on myopia

Prof. David Atchison
Queenland University of Technology, Australia

ABSTRACT

I will describe measurements of the shape of the fundi of emmetropic and myopic eyes using magnetic resonance imaging. The shapes will be compared with measurements of peripheral refraction. I will discuss how lenses can be designed to correct peripheral refractions and what effect these can have on peripheral visual performance.
